# Neprobojna stakla / Bulletproof glass

**N**eprobojna (balistička) stakla nudimo u ravnoj i savinutoj izvedbi. Ova stakla imaju svrhu zaustavljanja projektila ispaljenih iz različitih vatrenih oružja. Namijenjena su financijskim i državnim institucijama, ali i drugim objektima koji imaju potrebu za višim stupnjem sigurnosti, poput kladionica, kasina, te oklopnih (blindiranih) vozila. Početno ispitivanje balističkih stakala izvršeno je u laboratoriju za građevinsku fiziku IGH sukladno normi EN1063. Kao jedini hrvatski proizvođač balističkih stakala u mogućnosti smo izdati izjavu o sukladnosti što jamči usklađenost proizvoda i proizvodnog procesa sa europskim normama.

**B**ulletproof glass is available in flat and bent variations. The purpose of these glass is to stop projectiles from various firearms. It is mainly intended for use in financial and government institutions, but also other objects and buildings requiring a certain level of security, such as betting shops, casinos and armoured cars. Initial type testing of bullet proof glass was established in laboratory of architectural physics IGH according to norm EN1063. As the only Croatian manufacturer of ballistic glass we are allowed to provide a declaration of conformity, which ensures compliance of manufacturing process with the European standards.

Klasa (EN1063) Class	Kalibar Caliber	S*	NS**	Debljina S*/NS** Thickness (mm)	Težina S*/NS** Weight (kg/m <sup>2</sup> )
BR 2	9mm Luger	✓	✓	21 / 22,5	47,5 / 49
BR 3	0,357 Magnum	✓	✓	27,5 / 29	61 / 62,5
BR 4	0,44 Magnum	✓	✓	29,5 / 31	67,5 / 69
BR 7	7,62 x 51 mm	-	✓	- / 68	- / 152

S\* - sa odlazom krhotina / splintered

NS\*\* - bez odlaza krhotina / non-splintered
